---

**Compatibility** styling constitutes basic CSS alterations to better integrate the extensions with the template, rather than full theme integration. Example extensions: **K2, Tienda, Virtuemart and JomSocial**

**Note:** All the extensions below and their peripherals will not be included in the RocketLauncher package. You will need to download and install separately.

**Contro**

### I Third Party Styling

Enabled or Disable from **Admin** ☐ **Extensions** ☐ **Template Manager** ☐ **rt\_omnicron\_j15** ☐ **Advanced** ☐ **Third Party Styling** ☐ . Disable if you are not using any of the extensions for performance purposes.

All styling is located in the **/templates/rt\_omnicron\_j15/css/extended.css** file, so any customizations you wish to make, edit the contents of that CSS file.
